Career Objective

Aspiring Computer Science (AI) student with strong expertise in full-stack development and a solid foundation in data structures, algorithms and system design. Skilled in building scalable, high-performance applications and applying AI/ML techniques to solve real-world problems. Seeking an opportunity to apply and showcase my technical skills while continuously learning and contributing to meaningful solutions.

Education

Pranveer Singh Institute of Technology

B.Tech in Computer Science and Engineering (AI)

Cumulative CGPA: 7.67 | Percentage: 77.61% (till Sem 6)

2023 – Pursuing

Kanpur, Uttar Pradesh

Heliger Borden Education Centre

CISCE Board

Kanpur, Uttar Pradesh

Class XII (2022 – 2023): 76.8% | Class X (2020 – 2021): 88%

Skills

Programming Languages: Python, JavaScript, C++ , HTML, CSS

Frameworks and Libraries: React.js, Node.js, NumPy, Pandas, Matplotlib, Seaborn, OpenCV, Scikit-learn, TensorFlow, Keras

Databases and Tools: PostgreSQL, MongoDB, Postman, Git, GitHub, Vercel, Figma

Core Fundamentals: Data Structures & Algorithms, OOP, Database Management Systems, Operating Systems, Computer Networks

Soft Skills: Strong analytical skills & Problem-Solving Abilities, Effective Communication, Cross-Functional Team Collaboration, Social Media Management

Certifications

- **Artificial Intelligence Program** — Infosys Springboard May 2026
- **Python for Data Science** — Infosys Springboard May 2026
- **SQL (Intermediate)** — HackerRank May 2026

Experience

Operations Lead — MeetKats Creations Private Limited

Apr 2025 – Jun 2025

Internship | Remote

- Oversaw daily operations to streamline workflows and optimize resource allocation across teams.
- Implemented process improvements to enhance productivity and reduce operational bottlenecks.

Projects

AURIX: An Agentic Unified Risk Intelligence Platform (Major Project)

Feb 2026 – Ongoing

GitHub Repository | FastAPI, PostgreSQL, Redis, Supabase, React, Node.js

- Built AURIX, a platform that autonomously detects vulnerabilities across code, dependencies and infrastructure using Semgrep, Trivy and Gitleaks, then deploys Red/Blue LangGraph agents to generate verified exploit PoCs and self-healing patches via a Docker sandbox.
- Architected the Backend API Gateway (FastAPI, Supabase Auth, Upstash Redis) with JWT auth, async scan queuing, Redis-backed rate limiting and core REST endpoints (scan ingestion, status polling, webhook) - reducing overall development time by 50%.

AnnaSeva – Food Donation Platform

Feb 2026 – Mar 2026

GitHub Repository | React, Node.js, JavaScript, HTML, CSS, MongoDB

- Developed a web platform connecting food donors with distribution centres to enable real-time donations.
- Designed an intuitive interface to streamline the donation process and reduce food waste.

Agroshield – Crop Disease Detection and Recommendation

April 2025 – May 2025

GitHub Repository | React, Next.js, Node.js, TypeScript, TensorFlow, Keras, NumPy, Pandas, OpenCV, Scikit-learn, Tailwind, Vercel

- Developed machine learning models achieving **99.78% accuracy** for plant disease detection and crop recommendation using real agro-climatic data.
- Integrated models into a full-stack web application to deliver real-time predictions.

Achievements and Extracurricular Activities

- **Secretary, Google Developer Group on Campus PSIT** 2024 – Present
- **Social Media Coordinator, Magnanimous Foundation** 2024 – Present
- **ByteBattle Hackathon (MeetKats) - Event Coordinator** June 2025
- **HACKEMON Hackathon (SheBuilds) - Top 100 out of 600+ teams nationwide** April 2025
